

Chronic Diseases: a global view

Surveillance/NMH

WORLD

Disease Burden (DALYs), by broad cause group, 2001

Source: WHO 2002

Leading Causes of Mortality and Burden of Disease

Preliminary estimates for 2000

Mortality

%

- Ischaemic heart disease 13.7
- Cerebrovascular disease 9.5
- Lower respiratory infections 6.4
- HIV/AIDS 4.2
- COPD 4.2
- Diarrhoeal diseases 4.1
- Perinatal conditions 4.0
- Tuberculosis 2.8
- Lung Cancer 2.3
- Road traffic accidents 2.2

DALYs

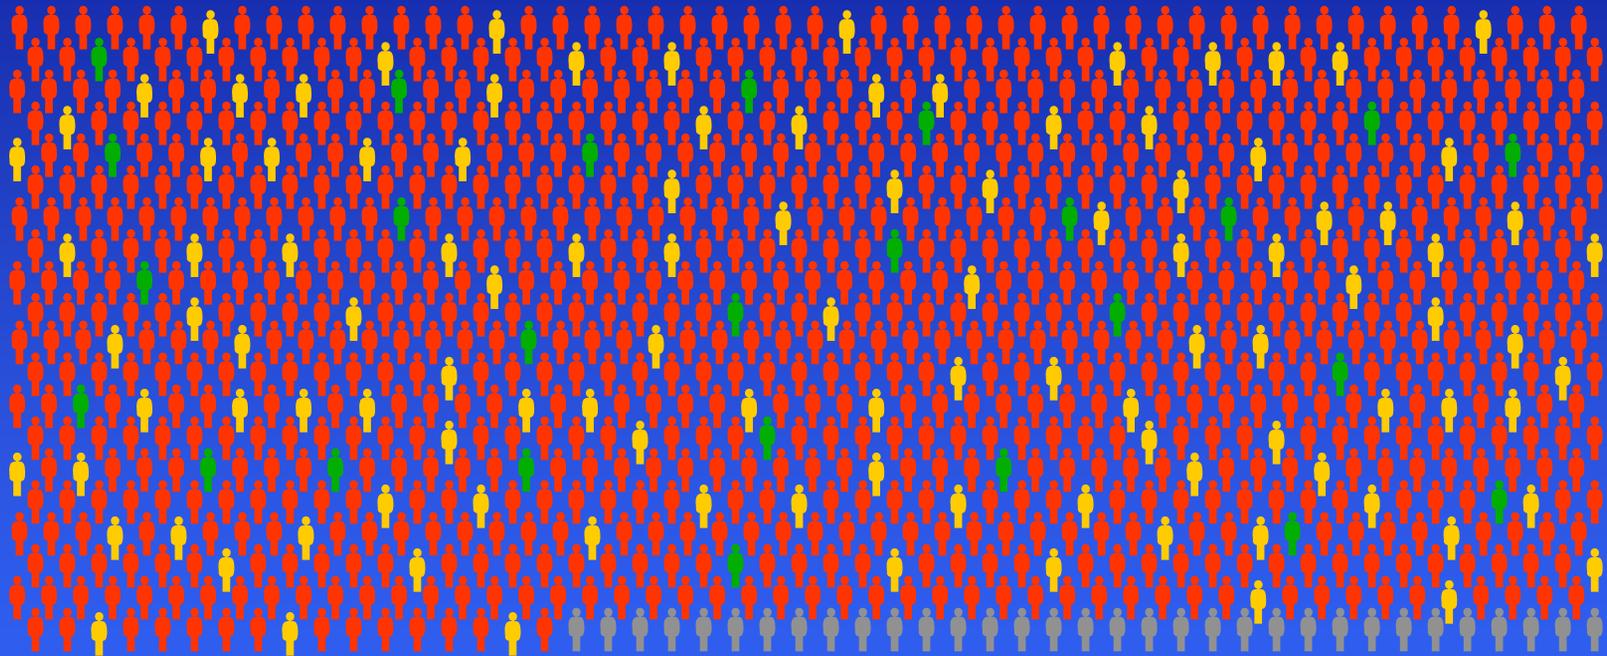

%

- Lower respiratory infections 6.7
- HIV/AIDS 6.2
- Perinatal conditions 6.2
- Diarrhoeal diseases 5.0
- Depression 4.1
- Ischaemic heart disease 4.1
- Cerebrovascular disease 3.5
- Malaria 3.1
- Road traffic accidents 2.8
- COPD 2.7

CHINA : Leading Causes of Death in Rural Areas, 1998

Rural Population: 813 million

 Communicable diseases (2.6%)

 Noncommunicable conditions (82.9%)

 Injuries (11.2%)

 Undiagnosed (3.3%)

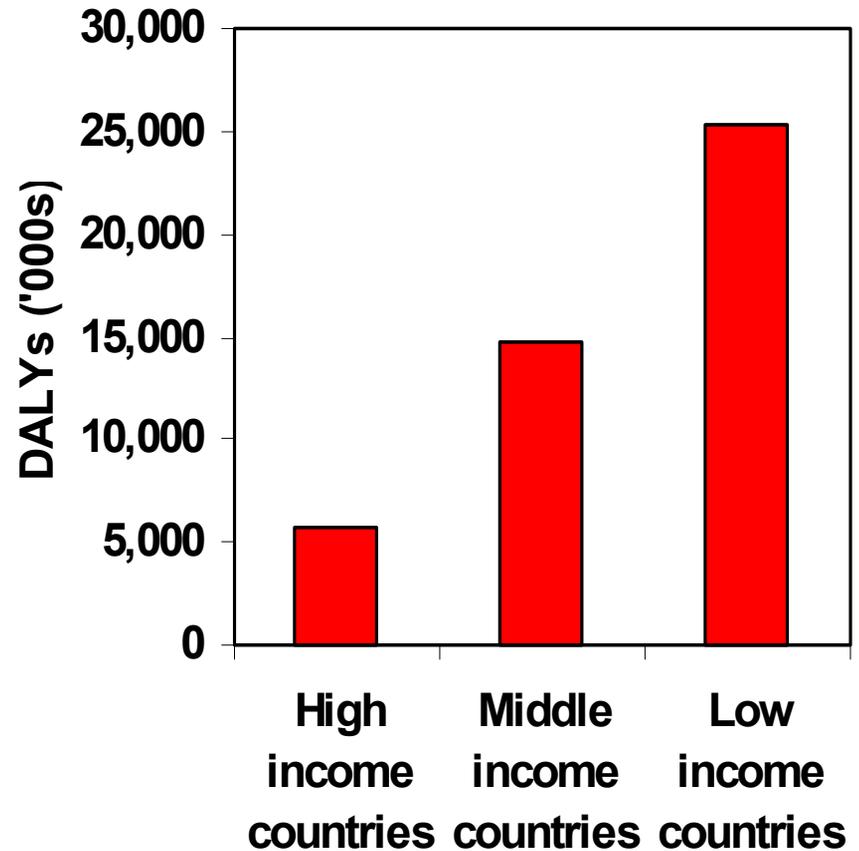

Trends in CHD deaths in urban and rural China (age standardized)

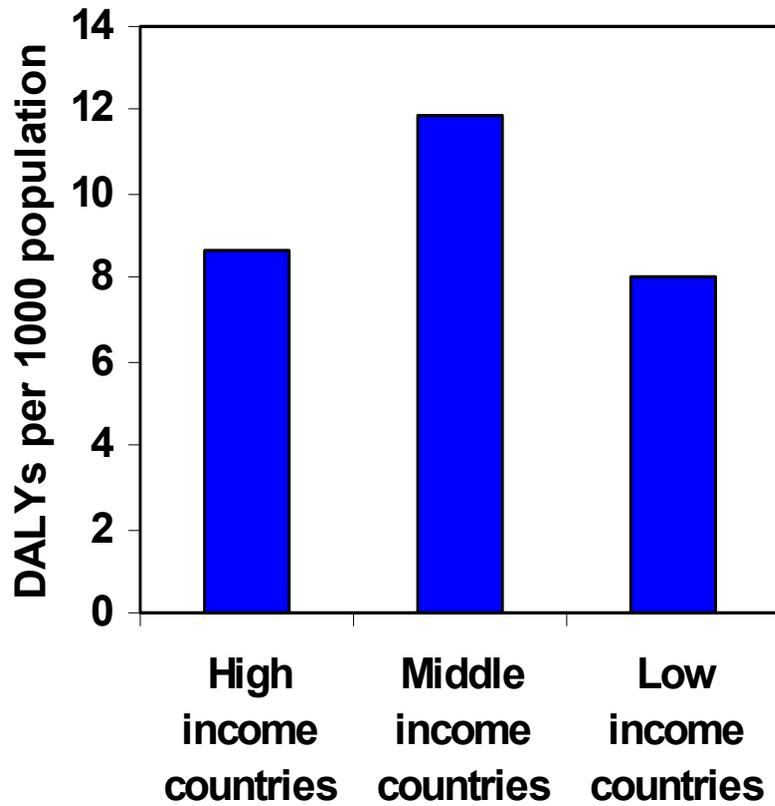

Ischaemic heart disease

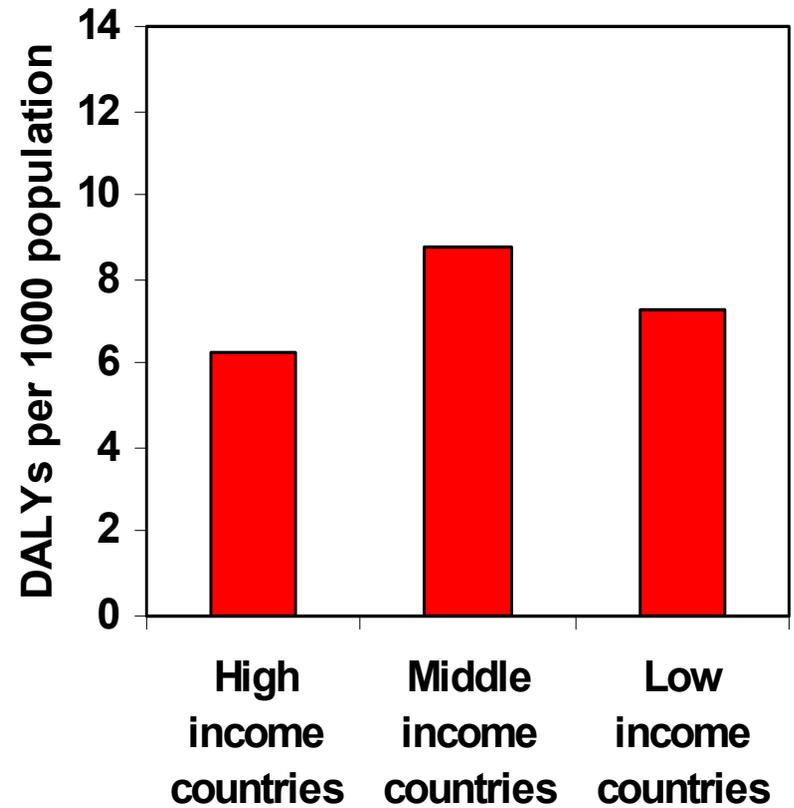

Stroke

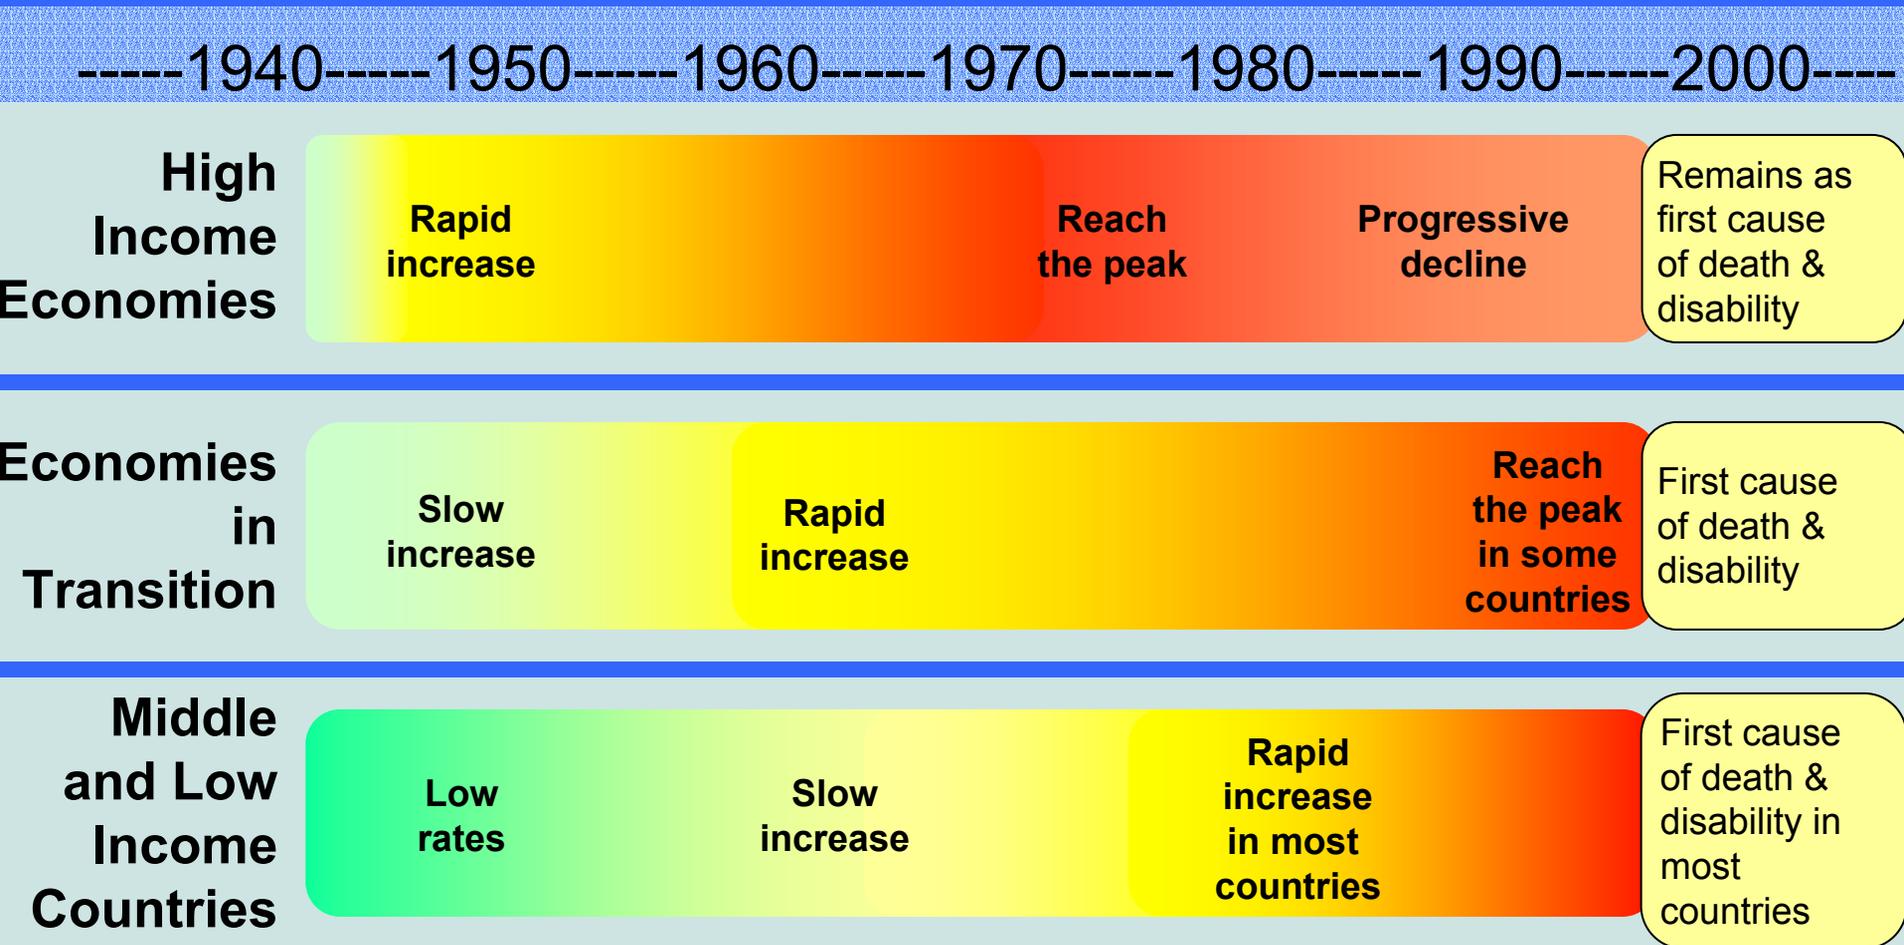

Ischaemic heart disease

Cardiovascular (CVD) epidemic in countries of different stages of development

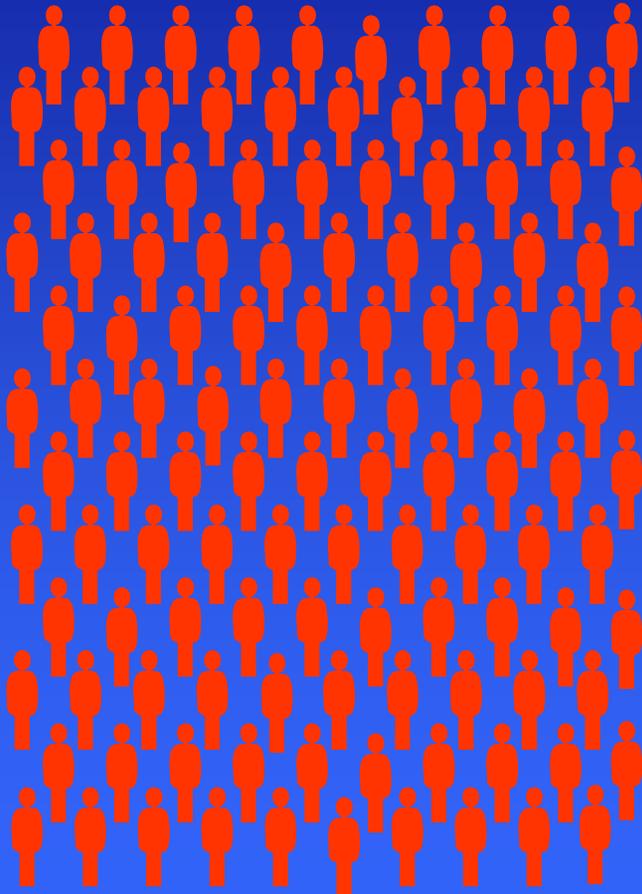

Source: WHO, NMH/MNC

Heart Disease and Stroke

More than 12 million deaths each year

 = 100,000 deaths

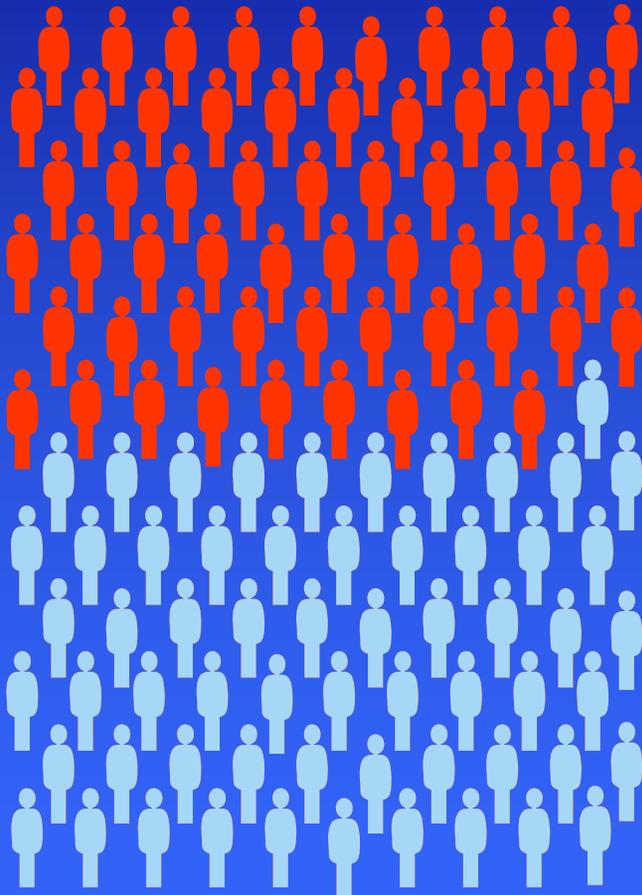

Source: WHR 2002

Heart Disease and Stroke

 = 100,000 deaths

More than 50% of these deaths can be prevented by reducing major risk factors such as:

- High blood pressure
- High cholesterol
- Low fruit and vegetable intake
- Tobacco use
- Obesity
- Physical inactivity

2002 World Health Report

“Reducing risks, promoting healthy life”

www.who.int/whr

www.thelancet.com

What is a risk?

**“A probability of an adverse outcome
or a factor that raises this probability”**

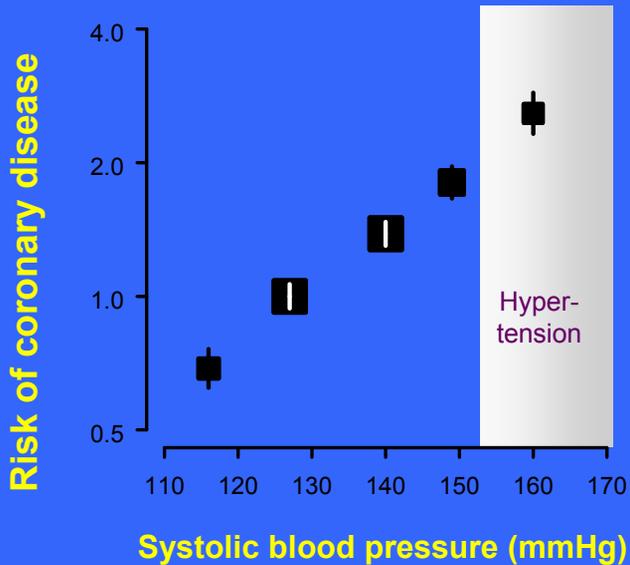

Criteria for choosing risk factors

- Likely to be among the leading causes of disease burden
- Not too specific or too broad
- High likelihood of causality
- Reasonably complete data
- Potentially modifiable

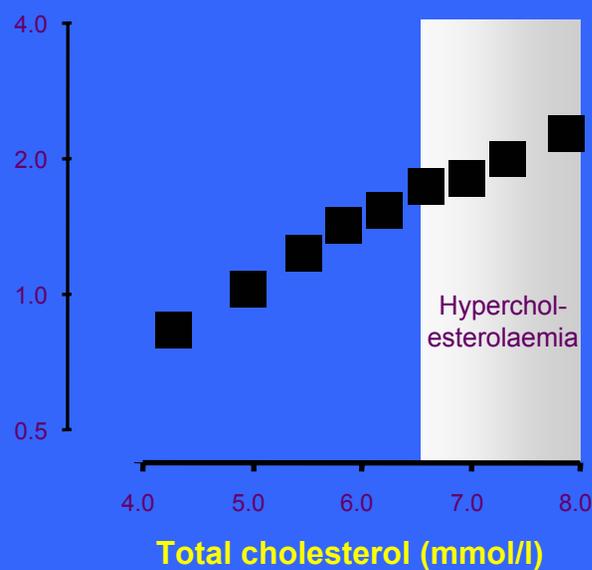

Continuous exposure and disease associations

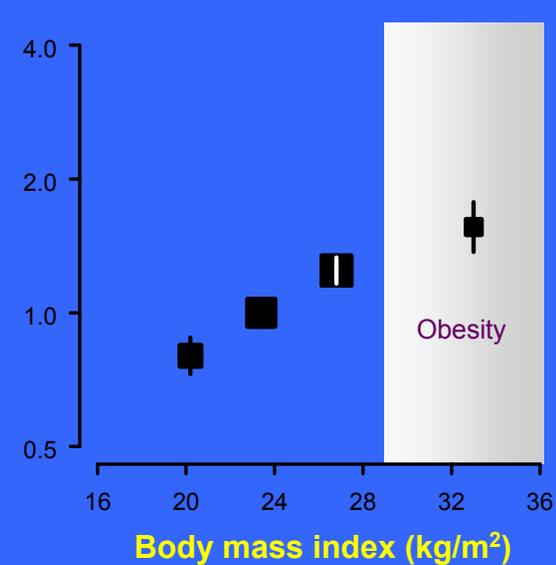

Blood pressure

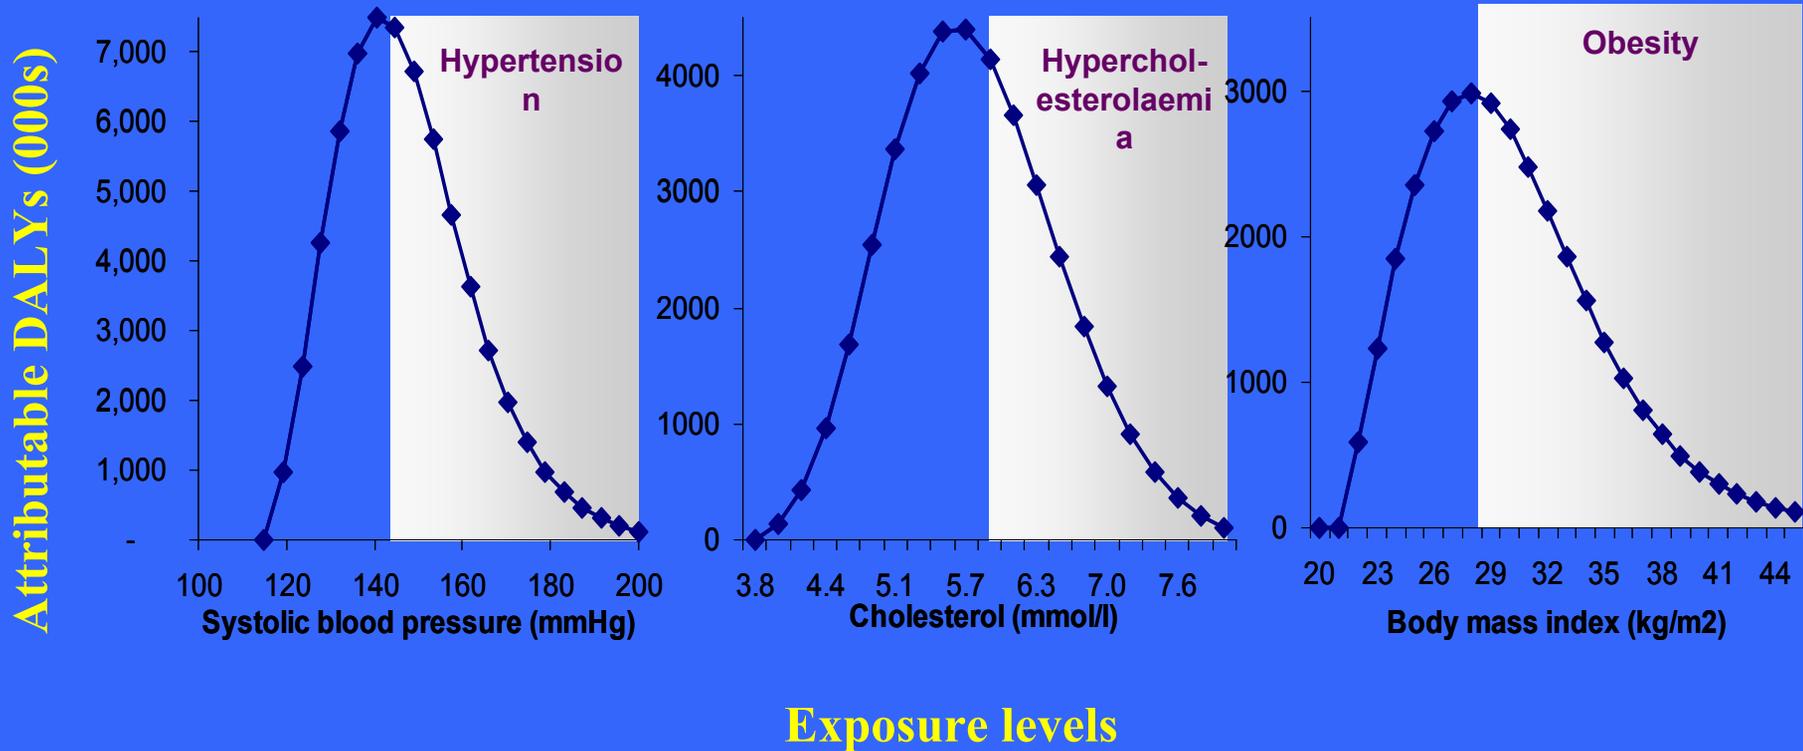

Cholesterol

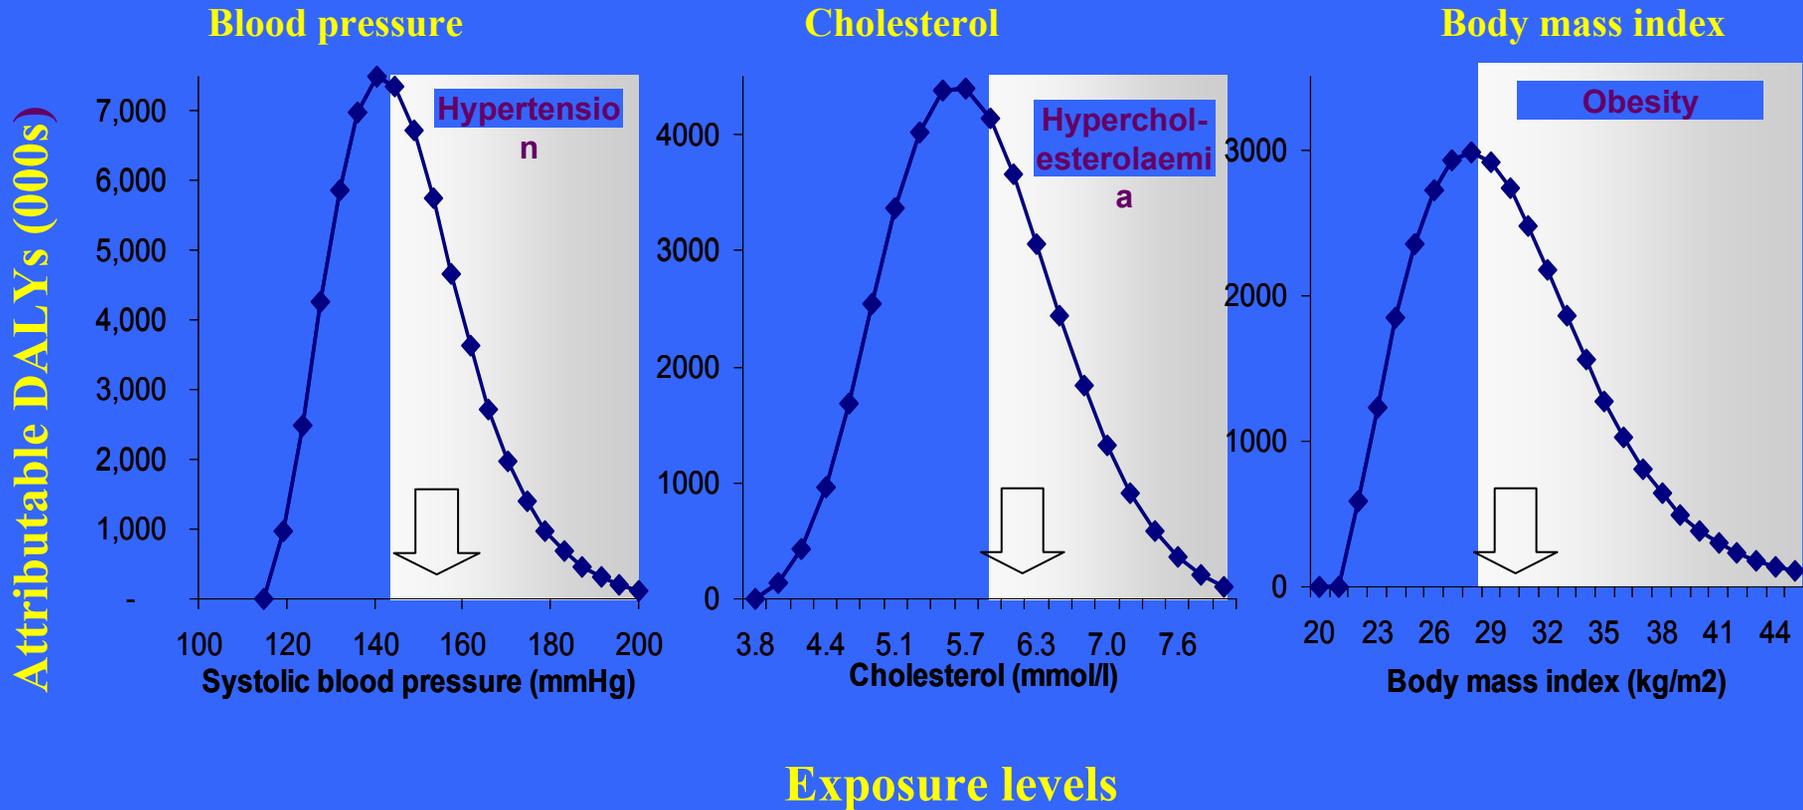

Body mass index

Distribution of attributable burden by exposure levels

Distribution of attributable burden by exposure levels

Commonly used threshold values for current definitions

Deaths attributable to leading risk factors, 2000

| | Male (000) | Female (000) | Total (000) | % |
|-------------------------|------------|--------------|-------------|------|
| Blood Pressure | 3,491 | 3,649 | 7,141 | 12.8 |
| Tobacco Use | 3,893 | 1,014 | 4,907 | 8.8 |
| Cholesterol | 2,112 | 2,303 | 4,415 | 7.9 |
| Underweight | 1,900 | 1,848 | 3,748 | 6.7 |
| Unsafe Sex | 1,370 | 1,516 | 2,866 | 5.1 |
| Low Fruit & Veg | 1,449 | 1,277 | 2,726 | 4.9 |
| Overweight | 1,168 | 1,423 | 2,591 | 4.6 |
| Physical Inactivity | 961 | 961 | 1,922 | 3.4 |
| Alcohol Consumption | 1,638 | 166 | 1,804 | 3.2 |
| Unsafe Water/Sanitation | 895 | 835 | 1,730 | 3.1 |

DALYs attributable to leading risk factors, 2000

| | Male (000) | Female (000) | Total (000) | % |
|--------------------------------|---------------|---------------|----------------|------------|
| Underweight | 69,733 | 68,067 | 137,801 | 9.6 |
| Unsafe Sex | 42,600 | 49,269 | 91,869 | 6.4 |
| Blood Pressure | 34,920 | 29,350 | 64,270 | 4.5 |
| Tobacco Use | 48,177 | 10,904 | 59,081 | 4.1 |
| Alcohol Consumption | 49,397 | 8,926 | 58,323 | 4.0 |
| Unsafe Water/Sanitation | 27,432 | 26,726 | 54,158 | 3.8 |
| Cholesterol | 22,136 | 18,301 | 40,437 | 2.8 |
| Overweight | 15,543 | 17,872 | 33,415 | 2.3 |
| Low Fruit & Veg | 15,117 | 11,544 | 26,662 | 1.9 |
| Physical Inactivity | 10,159 | 8,933 | 19,092 | 1.3 |

WHR 2002: Immersed in a sea of risk

Leading 10 selected risk factors as causes of disease burden

■ = Major NCD risk factor

| Developing countries | | Developed countries |
|-------------------------|---|---|
| High Mortality | Low Mortality | |
| 1 Underweight | Alcohol | Tobacco |
| 2 Unsafe sex | Underweight | Blood pressure |
| 3 Unsafe water | Blood pressure | Alcohol |
| 4 Indoor smoke | Tobacco | Cholesterol |
| 5 Zinc deficiency | Body mass index | Body mass index |
| 6 Iron deficiency | Cholesterol | Low fruit & vegetable intake |
| 7 Vitamin A deficiency | Iron deficiency | Physical inactivity |
| 8 Blood pressure | Low fruit & vegetable intake | Illicit drugs |
| 9 Tobacco | Indoor smoke from solid fuels | Underweight |
| 10 Cholesterol | Unsafe water | Iron deficiency |

Main message: NCD Risk Factors contribute to untimely deaths in all country settings

| <i>Condition</i> | <i>Cardiovascular Disease*</i> | <i>Diabetes</i> | <i>Cancer</i> | <i>Chronic-obstructive pulmonary Disease</i> |
|---------------------------------|--------------------------------|-----------------|---------------|--|
| <i>Risk factor</i> | | | | |
| <i>Smoking</i> | ☞ | ☞ | ☞ | ☞ |
| <i>Alcohol</i> | ☞ | | ☞ | |
| <i>Physical Inactivity</i> | ☞ | ☞ | ☞ | |
| <i>Nutrition</i> | ☞ | ☞ | ☞ | |
| <i>Obesity</i> | ☞ | ☞ | ☞ | ☞ |
| <i>Raised Blood pressure</i> | ☞ | ☞ | | |
| <i>Dietary fat/Blood lipids</i> | ☞ | ☞ | ☞ | |
| <i>Blood glucose</i> | ☞ | ☞ | ☞ | |

* Including heart disease, stroke, hypertension

Summary

- Small number of risks cause a huge number of chronic disease deaths
- “**Risk transition**” is now occurring in many parts of the world---countries facing a ‘double burden’ of risks i.e. maternal conditions and communicable disease plus noncommunicable diseases
- Substantial decrease in burden of disease possible even with just moderate risk factor modification

WHO's response :

An integrated approach to NCD surveillance and prevention

- **Growing burden of NCD, MH and Injury**
- **Impact of globalisation, urbanisation**
- **Greater emphasis on prevention**
- **Need for standard, comparable data**
- **Greater focus on trends in major risk factors**
- **WHO framework for surveillance (STEPS)**

A framework for Surveillance of major risk factors: a STEPwise approach

- **Hierarchical framework**
- **Standard methods, definitions and protocols**
- **Common approach with core, expanded and optional items**
- **Adaptable to local settings and existing systems**
- **Guiding principle: Keep It Simple (KISS)!**

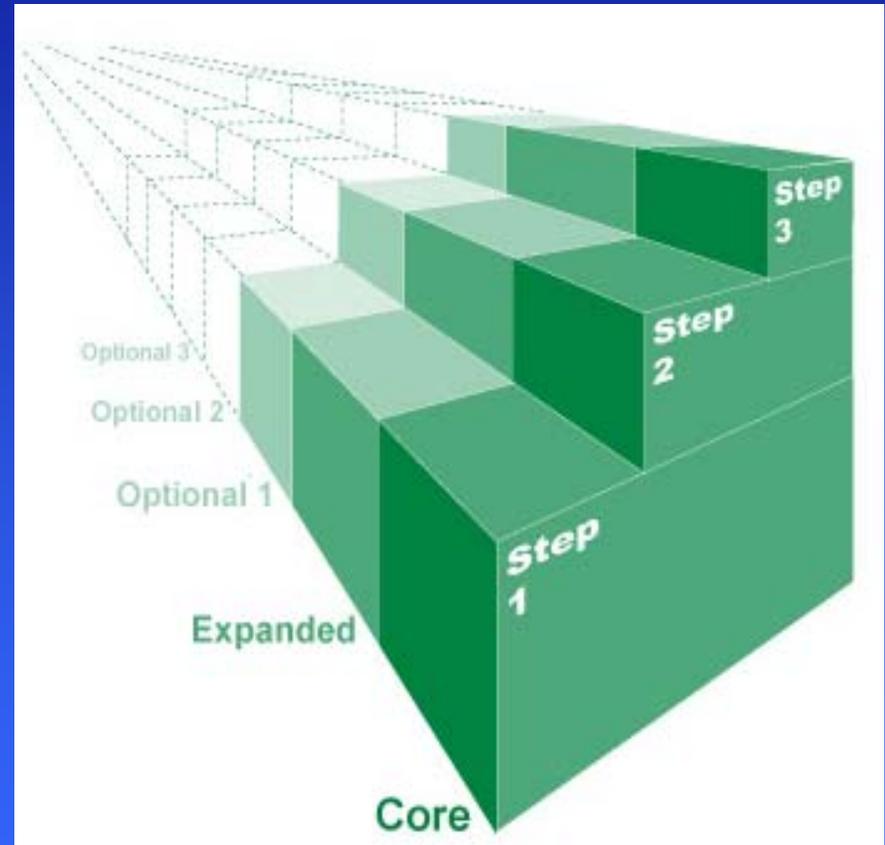

The WHO STEPwise approach: a framework for Surveillance of major NCD risk factors

Different levels of assessment

- Behaviours
- Physical measurements
- Blood samples

Three modules per risk factor:

- core
- expanded core and
- optional.

WHO STEPS - a tool for surveillance of major NCD risk factors

Step 1: Behaviors

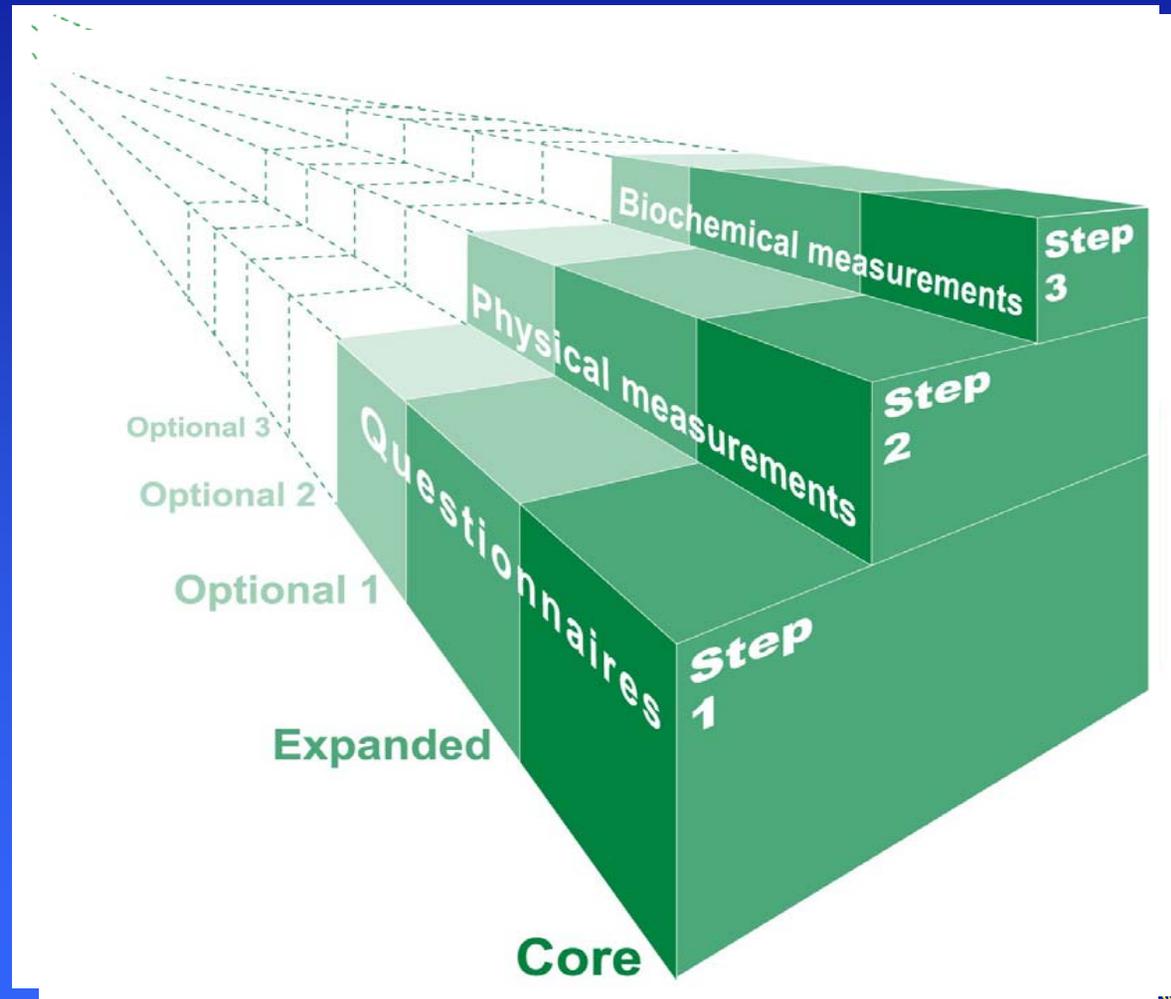

- Tobacco Use
- Physical Inactivity
- Intake fruit/veg
- Alcohol Use

Step 2: Physical measures

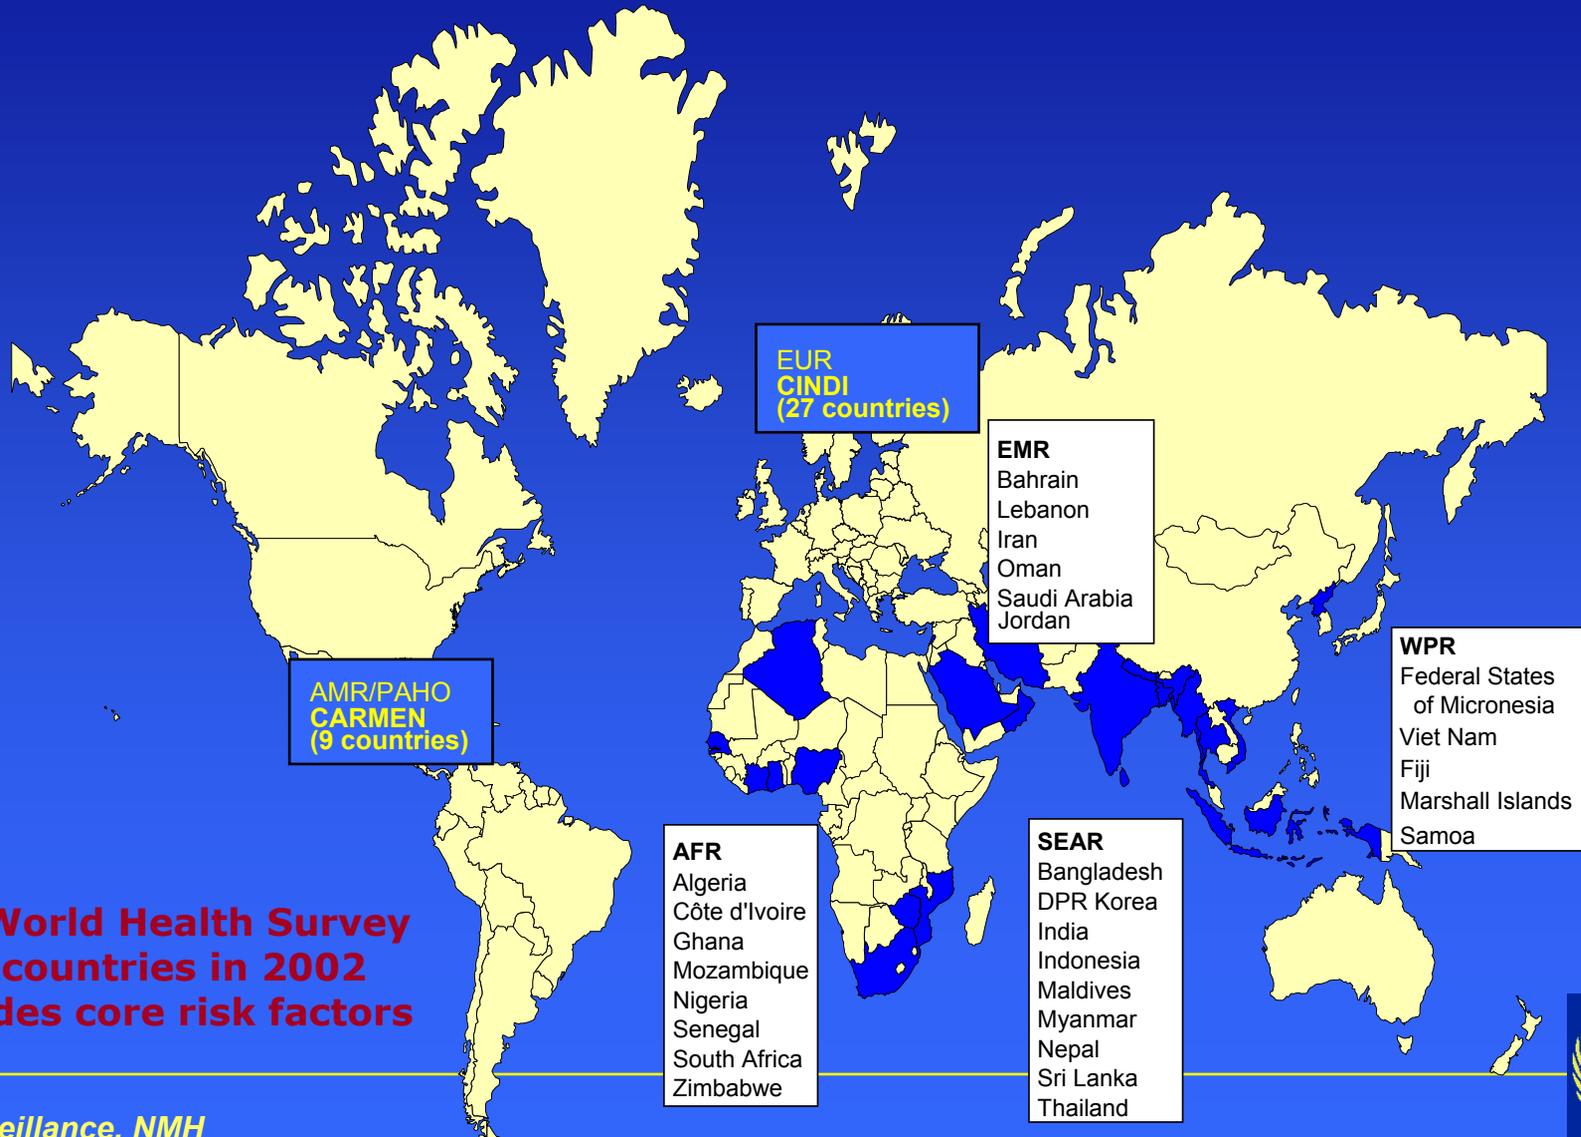

- Height /Weight
- Blood Pressure

Step 3: Blood samples

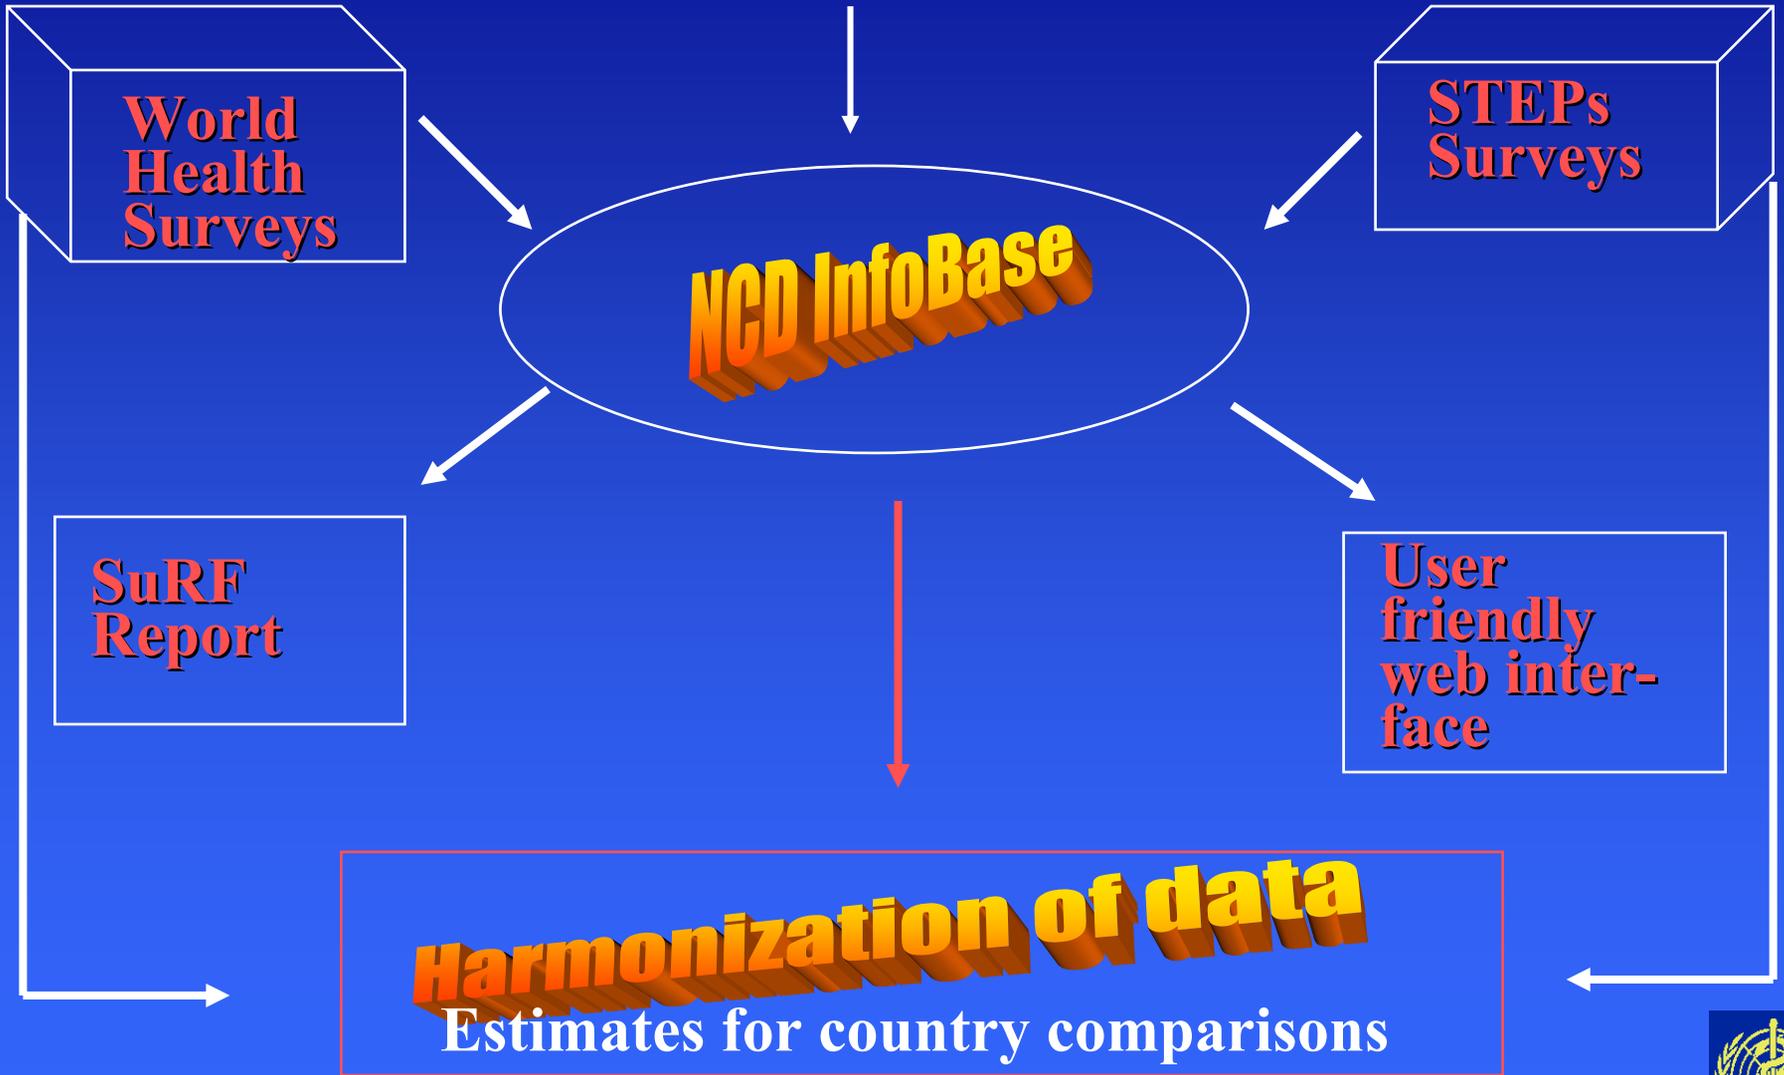

- Blood glucose/diabetes
- Cholesterol

Definition: Current daily smoker

Survey Population: National; Japan

Source: Kokumin Eiyō Chōsa Kekka No Gaiyō/Results of National Nutrition Study, 2001 Nov 8

Conclusions

- Role of established risk factors greater than commonly thought
- In many world regions, the leading 5 risk factors account for more than one-third of mortality and one-quarter of DALYs
- Risks are widespread – all risk factors have global impact, and the burden of many occurs predominantly in developing countries

Conclusions

- Cause(s) known of more than two-thirds of many major diseases eg. ischaemic heart disease, stroke, diabetes
- Research agenda driven by need to identify and implement affordable, practical interventions
- Substantial and rapid improvements in overall healthy life expectancy are possible if:
 - major risks are targeted
 - population-wide changes are achieved
